Contents

1	Command line export of a section in an org-file	1
1.1	Test section 1	1
1.2	Test section 2	2

1 Command line export of a section in an org-file

```
":"; exec emacs -l ~/Dropbox/kitchingroup/jmax/init.el --script "$0" "$@" # -*- mode: e
```

```
;; usage: export-org-section section-id org-file
```

```
;; this removes my -l init.el options
```

```
(pop command-line-args-left)
```

```
(pop command-line-args-left)
```

```
;; now goto, narrow and export the section
```

```
(let ((section-id (pop command-line-args-left))
```

```
      (org-file (pop command-line-args-left)))
```

```
  (find-file (expand-file-name org-file))
```

```
  (org-open-link-from-string (format "[[#%s]]" section-id))
```

```
  (org-narrow-to-subtree)
```

```
  (org-open-file (org-latex-export-to-pdf))
```

```
)
```

```
./export-org-section sec-1 cmd-line-section-export.org
```

1.1 Test section 1

Some words and an equation $e^x - 1 = 0$.

1.2 Test section 2

Some words and a table:

a	b
9	8
8	8

```
#!/bin/sh
":"; exec emacs --script "$0" "$@" # -*- mode: emacs-lisp; lexical-binding: t; -*-
(defun main ()
  (print (version))
  (print (format "I did it. you passed in %s" command-line-args-left)))

(main)
;; Local Variables:
;; mode: emacs-lisp
;; End:

./test2 arg1 arg2 arg3
```
