

1 Using :post

this doesn't work. (setq org-export-babel-evaluate t)

```
1 (concat
2   (when (not (string= "" attributes))
3     (concat (mapconcat 'identity attributes "\n") "\n"))
4   (when (not (string= "" caption))
5     (format "#+caption: %s" caption))
6   (mapconcat
7     'identity
8     (mapcar (lambda (rs) (concat "|" rs "|"))
9       (loop for row in data
10            collect
11              (mapconcat (lambda (x) (format "%s" x)) row "|"))
12     "\n")
13
14   (when post-attributes
15     (concat "\n" (mapconcat 'identity post-attributes "\n") "\n")))
```

```
1 import numpy as np
2
3 return np.matrix([[.123456789, 2], [3, 4]])
```

```
0.12345679  2
           3  4
```
