

1 Attempt 2 with :wrap

this works if you run the block on the backend.

(setq org-export-babel-evaluate nil)

```
1 (defun ex-aware-wrap ()
2   (unless org-export-current-backend
3     (concat "src org :exports results "
4             ":results replace drawer"
5             "\n#+caption: test"
6             "\n#+ATTR_LATEX: "
7             ":environment longtable"))))
```

ex-aware-wrap
