Dear All,  
the new exporter does not seem to handle nside ....  
If the org file contains

$$\backslash(f = \begin{cases} t & 1 \\ f & 2 \end{cases} \backslash)$$

the resulting tex file contains

$$\$(f = \begin{cases} t & 1 \\ f & 2 \end{cases} \backslash)$$

Is there a known fix or workaround?

$$f = \begin{cases} t & 1 \\ f & 2 \end{cases}$$
