1 Section links.

```
1  (setq org-latex-prefer-user-labels t)
```

t

I want reference to Section 1.1 from here (See [[sec:section-1]]).

Here's the code:

```
1  ;; Link types for targeting sections, tables, etc.
2  ;; These assume that headlines with CUSTOM_ID defined will export using
3  ;; that value as their \label keys.
4
5
6
7
8  ; Sections:
9  (org-add-link-type
10  "sec"
11  (lambda (path)
12    (org-open-link-from-string (format "[[#%s]]" path)))
13  (lambda (path desc format)
14    (cond
15     ((eq format 'latex)
16      (format "%s~\\ref{%s}" (or desc "Section") path)))))
17
18  ; etc. etc.
```

In Section **??** you can see it work.

1.1 test section
